1. Current detector
After common warm-up
Freeze state during probes
2. Paired group probes
Edit the actual box union
Pool by group class set
3. Joint retention gate
Check each class and operation
Require enough probe support
4. Select group policy
Strongest tested passing level
Balanced difficulty + exploration
5. Apply one group edit
Sample family and operation
Edit shared pixels once
6. Optimize detector
Full image and all annotations
Full detection loss
periodic update
